

SEED

FRUIT

STEM

ROOT

LEAF

FLOWER

When planted, it
grows into the
type of plant it
came from.

These are
sometimes
stored inside
the fruit.

Carries water
from the roots to
the rest of the
plant.

Keeps the plant
upright, keeps
the plant from
falling over.

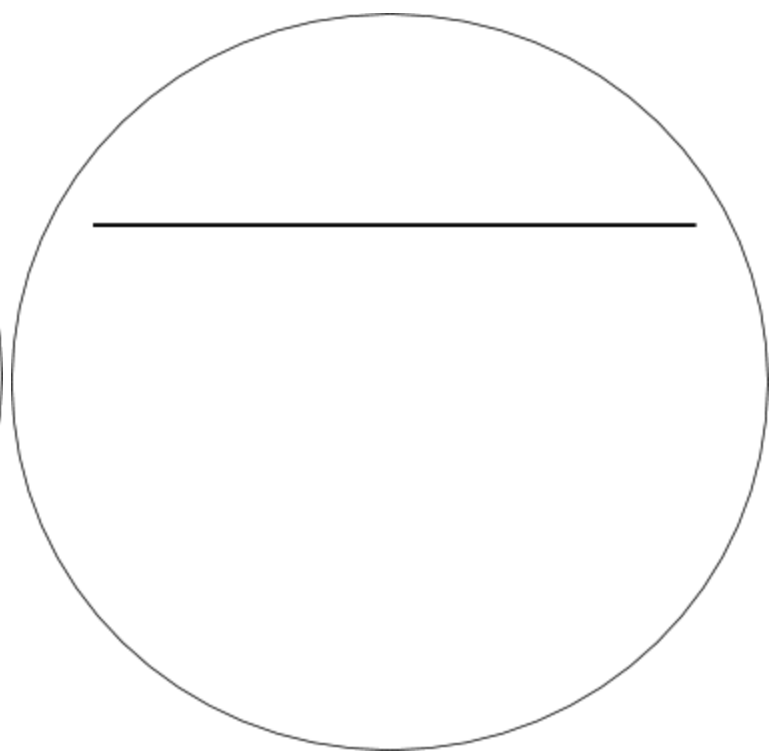

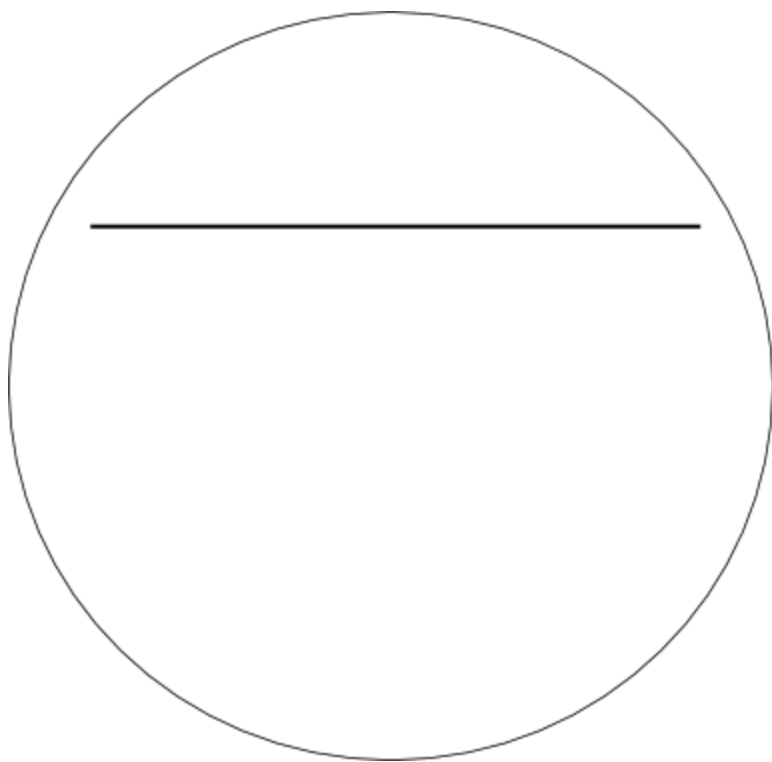

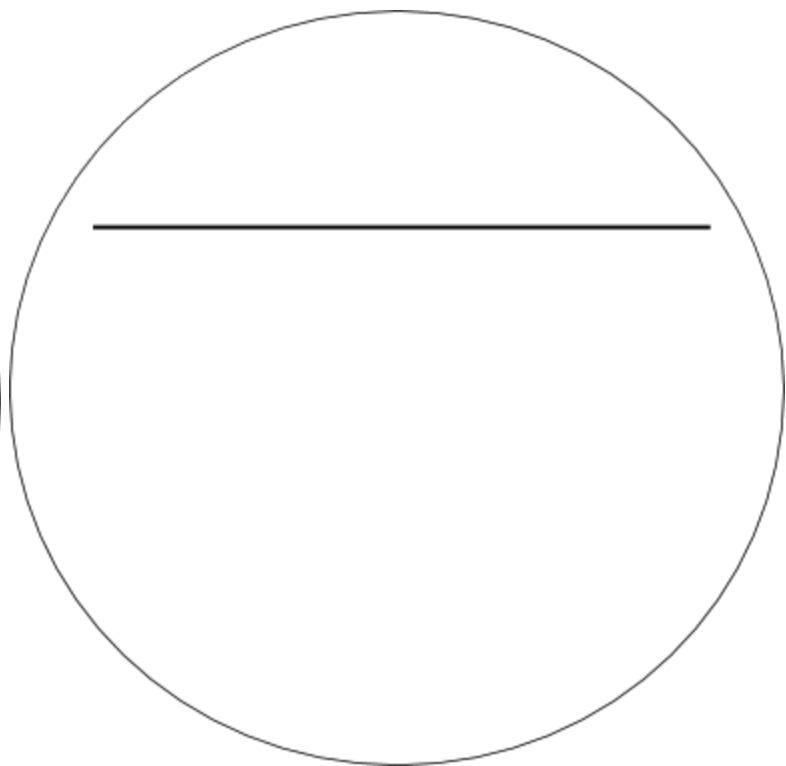

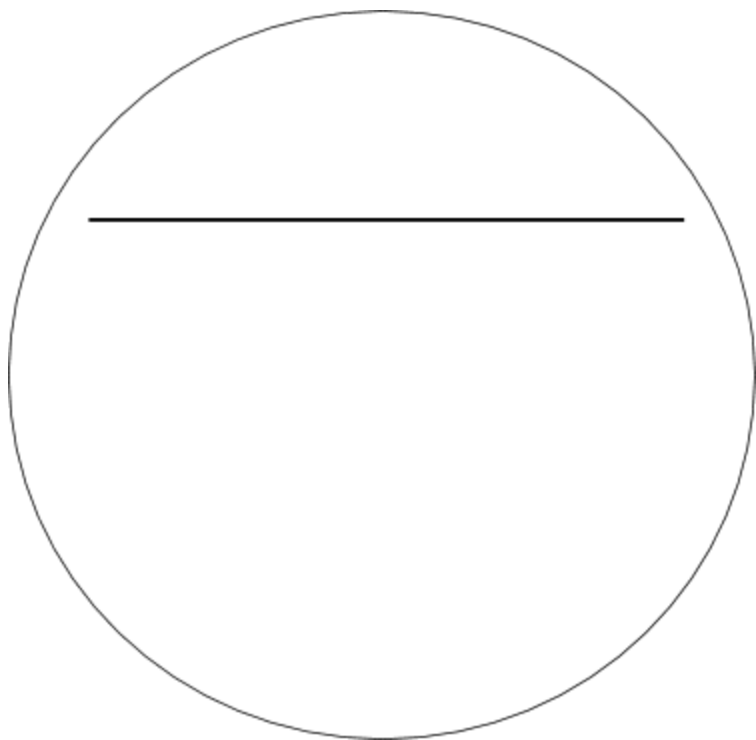

“Drinks”
water for the
plant.

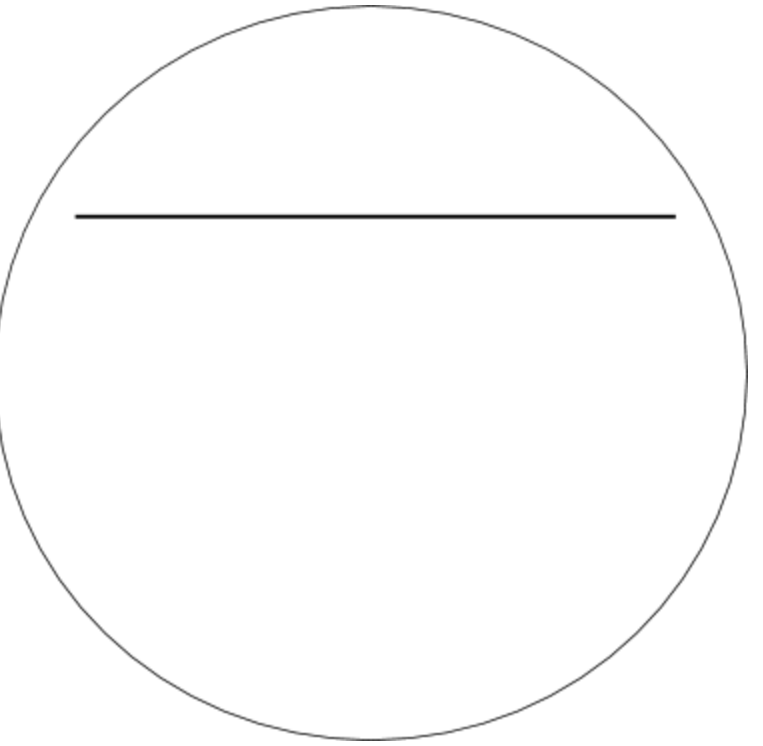

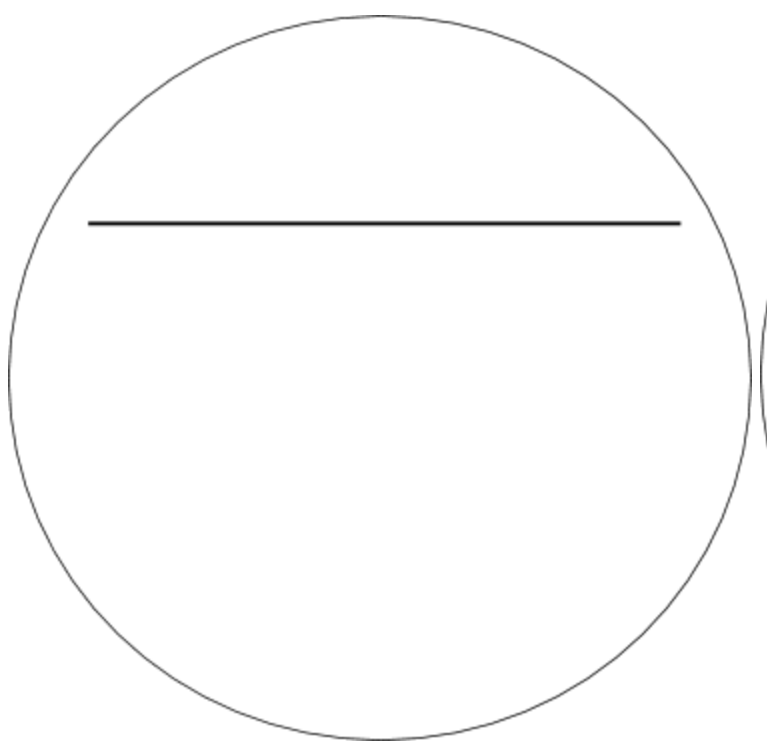

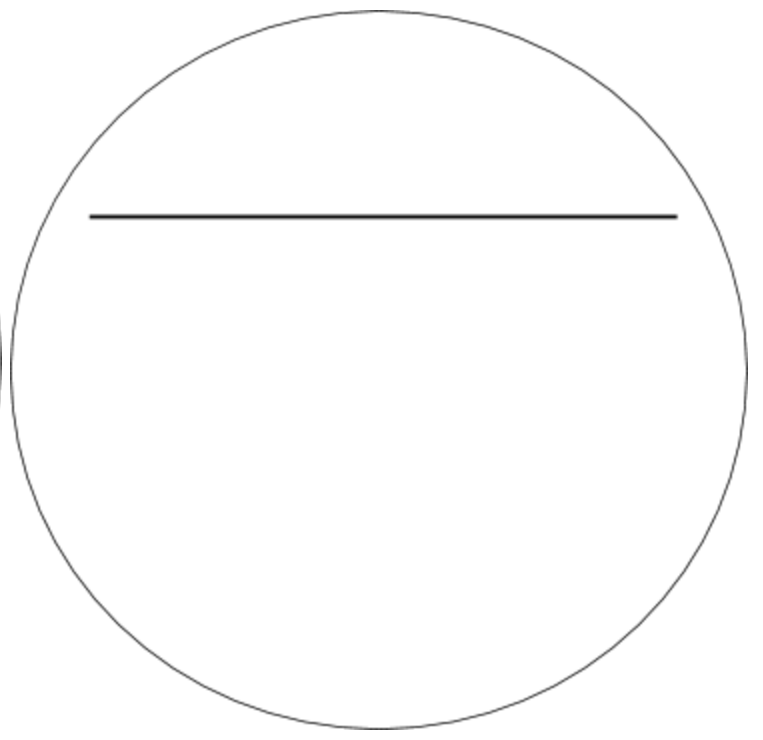

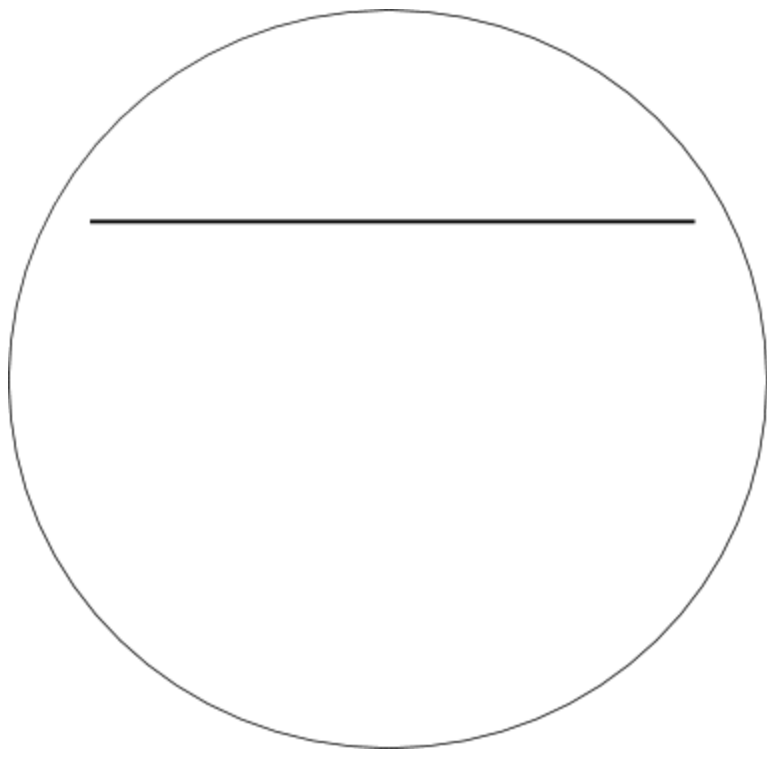

Helps hold the
plant in place
in the soil.

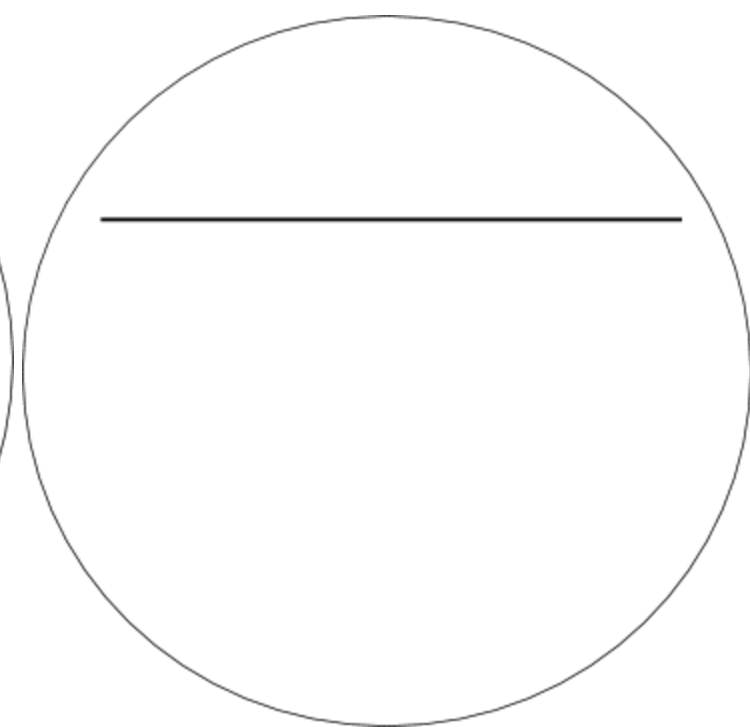

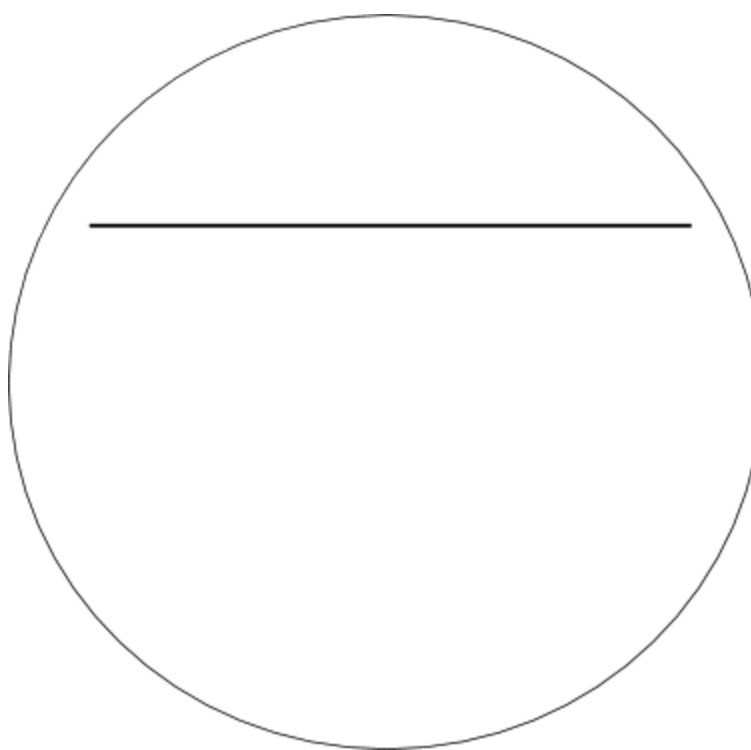

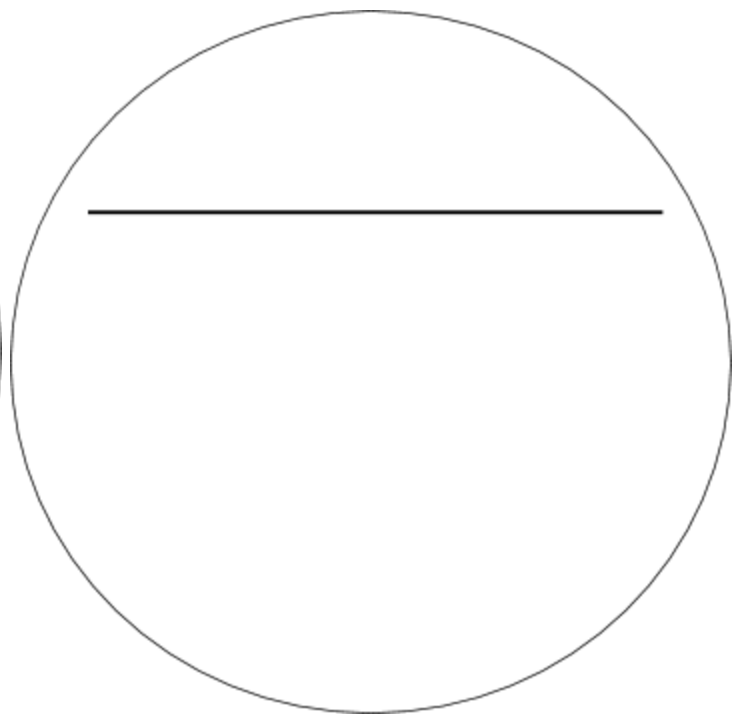

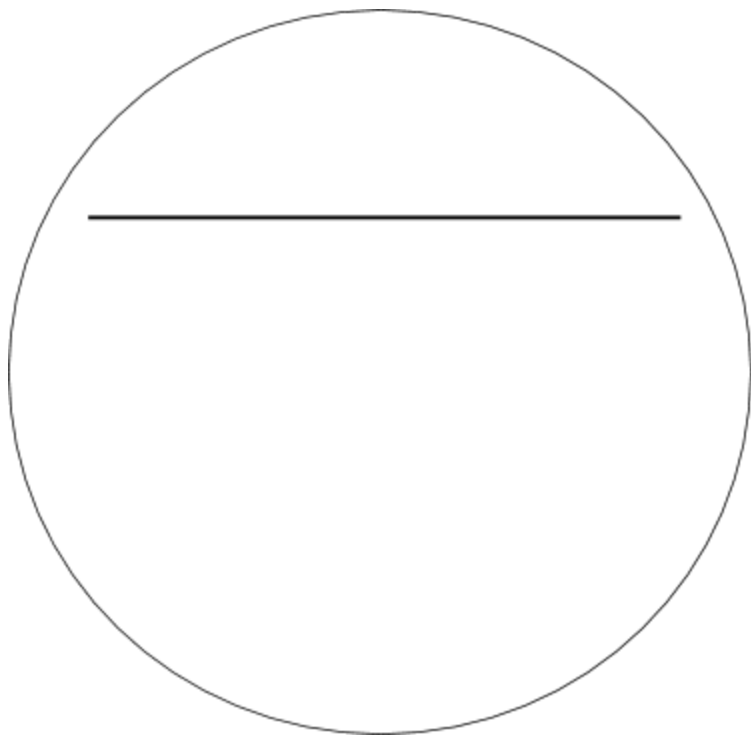

Makes food &
energy for the
plant through
“photosynthesis.”

The reproductive
part of plants
where fruit and
seeds are made.

The “suitcase”
that helps
protect seeds.
